

LOK BIRADARI PRAKALP HOSPITAL

HEMALKASA TAL-BHAMARAGAD, DIST- GADCHIROLI, 442710

 www.lokbirdariprakalp.org  lbphospital1973@gmail.com  +91-7588772832

This year treated 23620 patients From Maharashtra, Telangana and Chhattisgarh.

50 Beds Capacity, X-ray, Delivery Room, Ultrasonography, Operation Theater, Dental clinic, Eye clinic

1000+ peoples and 28+ villages were vaccinated for covid-19 first dose.

HIGHLIGHTS

- **Community engagement through village meetings.**
- **Covid-19 vaccination awareness programme.**
- **Covid-19 testing.**
- **Eye Surgery camp.**
- **Door to door immunization.**
- **Blood Donation camp.**
- **Menstrual health education programme.**
- **Initiatives - condom dispenser, iron ladle,**

Facilities at Lok Biradari Prakalp Hospital

USG

OPD

Pathology

Dental

Ophthal

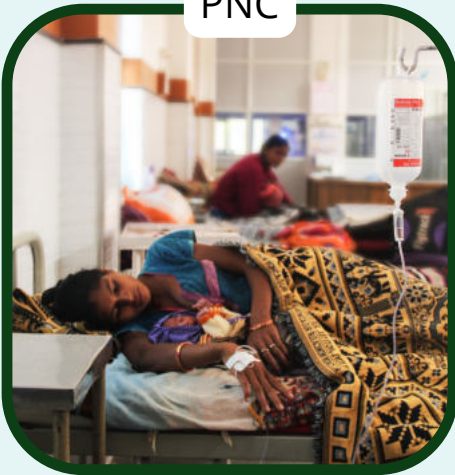

Operation Theater

NICU

PNC

Labour room

Digital X-ray

Annual Statistic

23620+

Outdoor Patients

280+

Hospital Deliveries

80+

Surgeries

Important statistic at a glance-

1	Indoor Patients	3014
2	Ophthalmology Patients	1033
3	Dental Patients	1307
4	Malaria	2302
5	Antenatal cases	679
6	Community Health Centers OPD	6480
7	CHC Malaria Patients	1180
8	NICU	35
9	Village level ANC clinics conducted	26
10	Patients examined at ANC clinic	302
11	SHAPE conducted	23

Detailed Highlights

Community engagement through village meetings-

Community engagement has always been a priority for LBP. going within the community, understanding their problems and discussing possible solutions with them and then coming up with plan to tackle the health issues is a strategy followed.

Following the covid-19 safety precautions LBP conducted village level meetings. The prevention & control strategies for malaria, Hygiene and sanitary practice of the community, misconceptions about covid-19 & its vaccination etc. were some of the important issues discussed in the village meetings. Importance of antenatal check up & institutional deliveries was reemphasized in these meetings by community health workers.

Covid-19 vaccination awareness programme

since last 2 years the world has been witnessing a global pandemic of covid-19.

since march 2020 LBP is standing firm to fight against the covid-19.

Initially the awareness activities were focused on covid-19 prevention and control protocols and now it is focused on covid-19 vaccination awareness. The authentic information about covid-19 vaccines was spread to more than 28 villages in Bhamaragad Tehsil. short and simple audio visual clips were recorded in local language by LBP team. these information rich videos were sent to youth in the community through whatsapp & bluetooth who then helped in spreading the information to whole community.

The awareness programme helped people to make informed decision about vaccination and contributed to the success of covid-19 vaccination campaign launched by govt. of India.

Covid-19 Test- find & stop

Here, the second wave of Covid-19 is more prevalent. The hospital had to be very careful when admitting patients with covid-19 due to the onset of other illnesses also. In particular, pregnant women are admitted before the expected delivery date. On 13th May we started testing not only indoor but also outdoor patients before admission.

Eye surgery camp

With the consistent fall in COVID-19 cases in the last quarter of year 2021, LBP organised ophthalmology surgery camp on 21st December, 2021. In this camp, a senior expert surgeon Dr. Adway Appawar operated on 18 patients.

A good pre-operative and post operative care was provided by LBP staff.

Door to Door Immunization campaign

Remote and geographically difficult to reach terrain is the greatest barrier for Covid-19 vaccination. Myths about the Covid vaccine and poor transport facilities together resulted in poor utilisation of vaccination services at the government hospital. Selfless work of LBP since 48 years has established a strong trust amongst the community. LBP joined hands with the government health service system of Bhamragad block to facilitate the Covid-19 vaccination campaign. Microplanning of vaccination programme, understanding community's concerns through Gram Sabha, awareness through authentic information, community participation, vaccine administration by LBP team etc. accelerated the Covid vaccination in the block. The public private partnership resulted in vaccination of 1062 individuals from 30 villages in the 1st phase of the campaign.

Blood donation camp

Severe anemia is a most common and life-threatening health issue amongst tribal women in this area. Blood transfusion is a life saving treatment for many patients including the pregnant women and their fetus. On the occasion of 48th Anniversary of LBP, a blood donation camp was organised by LBP team in coordination with Sub-District Hospital Blood Bank Aheri. Total 38 enthusiastic volunteers donated their blood which can save almost $38 \times 3 = 114$ lives.

Online Workshop for Nurses-

Medical field is a continuously changing and it is very important for the medical staff to get acquainted with the new protocols and practices. To continue the medical education of labor room staff of LBP, an online workshop was conducted in collaboration with LaQshya. This is a first step of LBP towards implementing the LaQshya labor room protocols to improve the quality of care.

Menstrual Hygiene Awareness Programme at Maraknar

Lok Biradari Prakalp celebrated its year ending with a 'Menstrual Hygiene Awareness Programme' in a beautiful tribal village named Maraknar.

Ms. Bhagyashri Lekhami- a young Sarpanch of Kothi Gram Panchayat helped in organizing this event on 30th December 2021. Around 200 women from 4 villages attended the programme. Dr. Anagha explained about menstrual hygiene, use of sanitary napkin and its disposal without littering the environment. The Rotary Club of Bolton Lever, UK has sponsored the supply of sanitary pads to 150 women for 1 year

Initiatives

Condom Dispenser

A condom dispenser machine was innovatively designed & fabricated at Lok Biradari Prakalp, Hemalkasa. The idea behind this is to make condoms easily available at public places & healthcare centres along with reducing taboos regarding use of family planning devices. This device works on simple mechanism, can be used without any electric supply & cannot be hampered by adverse weather conditions. On pilot basis, a single unit is installed in LBP hospital. Further its going to be installed at all community health centres of LBP, at Ghotuls of villages, at jatra (traditional gathering) places of villagers.

Family planning & oral health awareness in cultural gatherings

A health awareness film in Madia language was made with the help of our enthusiastic local staff on the subject of hazards of teenage pregnancy & importance of use of family planning, methods. It was screened at a local jatra event at the village Bejur.

Community health workers team with hospital staff of LBPH were present at Bejur Jatra event for oral health screening & awareness about family planning methods.

Distribution of Iron ladle-

For improving Hb status & reducing anaemic conditions in community use of iron ladle (based on researched experience of use of iron fish/leaf) in daily food preparation was planned. CHWs were provided with the iron ladle which they have to keep in the cooking pot while preparation of food. Hb status in blood samples of CHWs family were recorded before the intervention & is monitored in fixed intervals. The monitoring process is still in progress & will come to an conclusion in coming months.

Demonstration of CHWs about Nachni crop cultivation-

Re-introducing Nachni in crop cultivation practice & in diet of local tribals for improving nutritional status is one of the objectives of our nutritional program. For that purpose, CHWs of LBP were demonstrated the process of cultivation of Nachni crop from soil-bed preparation till getting final produce in a field visit at LBPs in-campus farm. CHWs were guided by Mr. Vilas Manohar during this visit.

Distribution and cultivation different crops at health centres-

We have initiated development of kitchen gardens at places available at our village health centres. CHWs were provided with seeds & saplings of different varieties, they have started its cultivation. These kitchen gardens will serve as a motivating factor for other villagers for its replication at their places. These will improve nutritional status & will also reduce their expenditure on vegetables in weekly markets.

“When you give roses to others, the perfume is bound to linger on your hands!”
